Solved on 
$$\int \frac{3}{x^2} - 1 dx$$

$$= \int 3 x^2 - 1 dx$$

$$= 3 \left( \frac{x^{-2}t^{-1}}{-2t+1} \right) - x + C$$

$$= 3 \left( \frac{x^{-1}}{-2t+1} \right) - x + C$$

$$= -3 \left( \frac{x^{-1}}{-2t+1} \right) - x + C$$

$$= -3 \left( \frac{x^{-1}}{-2t+1} \right) - x + C$$

$$= -3 \left( \frac{x^{-1}}{-2t+1} \right) - x + C$$

$$= -3 \left( \frac{x^{-1}}{-2t+1} \right) - x + C$$

$$= -3 \left( \frac{x^{-1}}{-2t+1} \right) - x + C$$
